Activity 5: Regulatory Change Impact Assessment

Mapping: K2, A2 / LO2

Duration: 25 minutes

Deliverable: Completed impact assessment and recommendation.

Goal

Use the SCAN model to assess the effect of an ACRA register change on processes, systems, roles, evidence and third-party instructions.

Real Case Study

Case: Yuan Shuhua - false RORC exemption declarations in annual returns

Date: 31 October 2025

Status: Convicted, fined and disqualified

Official source: ACRA - Three individuals fined for false declarations and consent failures

Published Facts

ACRA reported that Yuan Shuhua made false declarations in RH Corporate Pte Ltd's annual returns for financial years ended 31 December 2020 and 2021, stating that the company was exempt from keeping a Register of Registrable Controllers when it was not. He was fined $15,000 and disqualified from acting as a director or taking part in company management for five years.

Exercise Boundary

Use the conviction as the failure event. Apply current ACRA register guidance to design the corrected process; do not assume current deadlines were identical during the offence period.

Questions

1. Which factual and eligibility checks should precede an exemption declaration?
2. Where could annual-return and RORC processes fail independently or together?
3. How should current ACRA requirements change the control design?
4. What evidence proves review, challenge, approval and filing accuracy?

Detailed Step-by-Step

1. State the regulatory change in one precise sentence.
2. Identify affected entities, events and process owners.
3. Map impacts across people, process, technology/data, contracts and cost.
4. Score likelihood, impact, velocity and detectability of the current gap.

5. Compare at least two compliant implementation options.

6. Recommend one option with owner, milestones, residual risk and verification.

Worksheet

Requirement / issue	Business fact	Gap or impact	Decision / control	Owner	Deadline	Evidence

Acceptance Check

- ■ Applicability stated
- ■ All impact lenses considered
- ■ Options are compliant
- ■ Residual risk and verification included

Debrief

- What assumption had the greatest effect on your recommendation?
- What evidence would a director, auditor or regulator expect to see?
- What would you verify with qualified legal, tax or sector advice?

Sources

Educational activity only; verify current requirements with the relevant regulator and qualified advisers.

Real-Life Case Brief: Yuan Shuhua and False RORC Declarations

Regulator: Accounting and Corporate Regulatory Authority (ACRA)

Published: 31 October 2025

Procedural status: Convicted, fined and disqualified

Verified: 12 August 2026

Regulator-Published Facts

- Yuan Shuhua made false declarations in RH Corporate Pte Ltd's annual returns for financial years ended 31 December 2020 and 2021.
- The returns stated that the company was exempt from keeping a Register of Registrable Controllers when it was not.
- He was fined $15,000 and disqualified from company management for five years.

Classroom Boundary

The conviction is the real-life failure event. Learners must verify current RORC requirements and must not assume today's deadlines were identical during the offence period.

Official Evidence

ACRA - Three individuals fined for false declarations and consent failures

Completion Checklist: RORC Change Impact

- Verify the entity's actual exemption status against current ACRA guidance.
- Reconcile the annual-return declaration to the underlying RORC evidence.
- Map impacts across people, process, technology/data, third parties and cost.
- Document who prepares, checks, approves and files.
- Require evidence for eligibility rather than relying on a repeated prior-year answer.
- Compare at least two compliant implementation options.
- State residual risk, owner, milestones and verification method.
- Separate current-guidance requirements from offence-period case facts.
