Activity 8: 90-Day Compliance Operating Model

Mapping: K2, A3 / LO2

Duration: 20 minutes

Deliverable: 30-60-90 day roadmap and monthly compliance dashboard outline.

Goal

Design a practical 30-60-90 day operating model covering ownership, calendar, controls, training, reporting, speak-up channels and assurance.

Real Case Study

Case: Stars Engrg - fatal 2021 Tuas workplace explosion

Date: 25 June 2026 sentencing announcement

Status: Director and production manager sentenced; company fined $500,000

Official source: MOM - Stars Engrg director sentenced over 2021 Tuas explosion

Published Facts

MOM reported that a 24 February 2021 explosion at Stars Engrg's Tuas worksite killed three workers and injured seven. A heated mixer had been operated unsafely despite overheating, oil leaks, smoke and an earlier fire. Investigations identified failures in risk assessment, safe work procedures, maintenance, supervision and training. The director was imprisoned, the company fined $500,000, and the production manager imprisoned for obstructing justice after messages were deleted.

Exercise Boundary

The published failures are the diagnostic baseline. The 30-60-90 day operating model is a learner-designed remediation and prevention plan, not MOM's prescribed plan for the company.

Questions

1. Which warning signs and unsafe conditions required immediate stop-work action?
2. Which risk, maintenance, training and supervision controls should be stabilised first?
3. What should management and the board see about exceptions and unresolved hazards?
4. How should evidence preservation and speak-up protection be built into the model?

Detailed Step-by-Step

1. Inventory obligations by entity, people, data, workplace and sector.
2. Assign RACI roles and an executive sponsor.
3. Create a central calendar and issue/escalation register.
4. Select priority preventive and detective controls for the first pilot.
5. Design role-based training and a protected advice/reporting channel.

6. Define leading and lagging metrics, test cadence and board reporting.

Worksheet

Requirement / issue	Business fact	Gap or impact	Decision / control	Owner	Deadline	Evidence

Acceptance Check

- ■ Priorities risk-based
- ■ Owners and cadence clear
- ■ Training and speak-up included
- ■ Metrics test effectiveness, not activity alone

Debrief

- What assumption had the greatest effect on your recommendation?
- What evidence would a director, auditor or regulator expect to see?
- What would you verify with qualified legal, tax or sector advice?

Real-Life Case Brief: Stars Engrg Tuas Explosion

Regulator: Ministry of Manpower (MOM)

Published: 25 June 2026

Procedural status: Director and production manager sentenced; company fined $500,000

Verified: 12 August 2026

Regulator-Published Facts

- A 24 February 2021 explosion at Stars Engrg's Tuas worksite killed three workers and injured seven.
- The mixer was operated despite overheating, oil leaks, smoke and an earlier fire.
- Investigations identified failures in risk assessment, safe work procedures, maintenance, supervision and training.
- The production manager was imprisoned for obstructing justice after messages were deleted.

Classroom Boundary

The published failures are the diagnostic baseline. The 30-60-90 day plan is a learner-designed operating model, not MOM's prescribed remediation plan.

Official Evidence

MOM - Stars Engrg director sentenced over 2021 Tuas explosion

Completion Checklist: 30-60-90 Compliance Model

- Define immediate stop-work and hazard-escalation authority.
- Preserve messages, logs, inspection evidence and incident records.
- Stabilise risk assessment, safe work procedures, maintenance, supervision and training.
- Assign board/executive sponsorship and operational accountability.
- Create a central calendar, issue register and overdue escalation path.
- Include protected advice/speak-up channels and anti-retaliation controls.
- Use leading measures such as overdue critical actions, not training counts alone.
- Separate the learner roadmap from MOM's published findings.
